

Electricmeg.com Presents:

The Quantum Creative Workshop

- Activate Your Inner Superhero -

Electricmeg is a multimedia artist and researcher of Quantum Physics & Consciousness. In this lecture/performance/slideshow/workshop, appropriate for all ages, she presents an introduction to the Quantum Universe and initiates audience members into the power of their quantum energy.

Since the discovery of Quantum Physics in 1900, humanity has changed dramatically as increasing knowledge of Quantum Physics has been applied the military and global industry. Unfortunately, not even the most basic elements of this vital science are taught in our schools, and the divide between *those who understand the concepts of the Quantum Universe* and *those who do not* is becoming the most critical gap of all.

With this workshop, Electricmeg seeks to bridge that gap; Only by being armed with the right information do we have the ability to create a most beautiful future filled with passion, purpose, health, equality & abundance.

"To Understand the Universe, Think in terms of Energy, Frequency and Vibration" - Nikola Tesla

This workshop won the 2017 Sullivan County "Artist in the Community" Decentralization Grant and was presented to students in the Boys and Girls Club of Monticello and Liberty NY. The students were invited to "engage their quantum creative energy" by writing a poem called *The Value of Nature*, and the 18 responses were set to Electricmeg's nature photographs. This resulted in a stunning collaborative book called *The Value of Nature*, of which half the proceeds are directed back to the Boys and Girls Club. Similar collaborations may be possible for your organization. This has a valuable benefit of the poet being able to put 'published poet' on their resume.
